

Programme: School of Business – Business Administration Class: SY Semester: III

Name of the Subject: Business Intelligence

Time:2 hours

2) All Questions are Compulsory

A Explain business intelligence and need of business intelligence.

B Enumerate Business Intelligence Software.

C Differences between Artificial intelligence and Human intelligence.

- A** Brief Factors influencing the BI system.
- B** Explain uses of Transportation Management with BI.
- C** Explain four factors influence data gathering.

A Define Database Management System (DBMS) and list any five applications of DBMS in brief.

B Compare and contrast between file processing system and DBMS.

C Define the following types of databases: (i) Single-user database; (ii) Multiuser database; (iii) Centralized database; (iv) Distributed database; (v) Workgroup database; (vi) Enterprise database.

A Explain the degree of data abstraction in detail. Describe its different levels with a neat, labelled diagram.

B Write a short note on the following topics, including their advantages and disadvantages:
(i) Entity-Relationship Model; (ii) Relational Model.

C Write the query for the following questions: -

- (i) Write a syntax for creating a table with the following information: Table name: Customer, Columns and data types are (id number (4), name varchar (20), subject varchar (30)).
- (ii) Write a query to insert two meaningful data values into the above created customer table.
- (iii) Write a query to alter the customer table by adding a new column experience of type number (2).
- (iv) Write a query to drop the subject column from the customer table.
- (v) Write a query to display the details where the customer's name starts with 'S'.
- (vi) Write a query to describe customer table.

Q 5 Answer the following (any 2)

12

- A** Define integrity constraints and explain the two types listed below with suitable examples:
- (i) Entity Integrity; (ii) Referential Integrity.
- B** Describe the following unary operators in relational algebra with examples: (i) Select; (ii) Project; (iii) Rename.
- C** Who is E.F. Codd, and what role did he play in shaping modern database systems? Elaborate on his contributions and describe his rules for relational databases in detail.
